Grape Vines

Special Notes for Season 1916.

Cuttings of Phylloxera Resistant stocks to be largely propogated in May - June.

Grafted cuttings of Isabella - scions - and Phylloxera resistant stocks to be largely propogated and buried to terminal eye in July - August. Ridges to be removed on union being made.

All rooted cuttings now in Propogating Ground to be planted one by each resistant stock now on Vine Fences, and enarched during coming season.

Resistant stocks to be planted by vines obtained from Fergusson so that these may be enarched during the ensuing growing season

Grape Vines. Frost Injury. Grape Vines

The young growth of all varieties was destroyed by the frost of Oct 17-18 when a terrestrial minimum of 23° Fah. was recorded. C.B.

It appears extremely doubtful whether in a great number of 2.11.16
instances the young vines will recover from effects of above frost C.B.

Vine Cuttings from Nursery Stocks.
